

## FAL Part 125 Honda Civic 1992-2000

### Installation Instructions

---

1. Disconnect battery by removing negative terminal.
2. Find the gray electrical connector on the fan, usually mounted on passenger side of old shroud. Un-plug it. (you need to push in on a tab on the male half to release a catch hidden inside the connector)
3. Unscrew the old fan at the top (2 screws), at the bottom (2 screws). Keep the screws. On some Civics, there are no screws at the bottom. Take out the old fan.
4. Attach the top & bottom brackets to your new, improved FAL fan with the serrated phillips screws supplied.
5. Slide the fan into place, and reattach with the original screws. Use washers provided for radiators that require screws at the bottom.
6. Reconnect the electrical connectors back together, and apply warning decal to a highly visible spot in engine compartment.
7. Reconnect battery
8. Drive away - You are finished!

***Note: If you work on the engine with the ignition on,  
the fan may come on unexpectedly when the engine is warm.***
