October 26, 2009

Fife, Washington –improving your cooling system’s efficiency lead to improved fuel economy and better performance. The factory fan and clutch assembly is directly powered by the engine’s crankshaft; which takes a bit of horsepower to spin it. Switching to an electric cooling fan, not only removes weight to free up more power, it also makes the engine run at optimum temperatures to improve engine efficiency. The #674 is a direct bolt-on replacement for 1984-'96 Toyota 4 x 4.

Flex-a-lite’s fan system #674 creates 3000 CFM of air-flow that can instantly bring down the temperature of your coolant, without drawing power from the engine. Part # 674 comes equipped with electronic control unit that constantly measures coolant temperature and air conditioning use. Adjustable temperature range is between 160 to 240 degrees.

All of Flex-A-Lite’s products are made in the U.S. with glass reinforced nylon and a reliable method for improving horsepower, torque and fuel economy on passenger cars, full size trucks and SUVs. For more information, contact **Flex-A-Lite, 7213 45th St. Ct. East Fife WA 98424, (800) 851-1510**. Or visit them on the web at www.flex-a-lite.com.
